ELSEVIER

Powder Technology 105 (1999) 454–459

POWDER TECHNOLOGY

www.elsevier.com/locate/powtec

Subject Index of Volume 105

Abrasion
Attrition as a process of comminution and separation, 205
Additives
The influence of suspension properties on ultra-fine grinding in stirred ball mills, 357
Agglomerates
Effect of interface energy on the impact strength of agglomerates, 66
Numerical simulations of agglomerate impact breakage, 74
Air classification
Industrial classification in a new impeller wheel classifier, 186
Air classifier
Industrial classification in a new impeller wheel classifier, 186
Air-jet mill
A grindability test to study the influence of material processing on impact behaviour, 21
AlN–Al alloy composite
Cryomilling of Al/AlN powders, 328
Alumina beads
Breakage of macroporous alumina beads under compressive loading: simulation and experimental validation, 57
Anatase
Mechanochemical synthesis of $CaTiO_3$ from a $CaO–TiO_2$ mixture and its HR-TEM observation, 162
Associations of mills
Prediction of the product size distribution in associations of stirred bead mills, 228
Attrition
Breakage mechanisms and mill performance in ultrafine grinding, 135
Attrition as a process of comminution and separation, 205

Ball mill
Disintegration of microorganisms in a bead mill with a multi-disk impeller, 389
Ball milling
Synthesis of thermoelectric materials by mechanical alloying in planetary ball mills, 149
Ball mills
Particle motion and energy distribution in tumbling ball mills, 222
Ball size effects in comminution
The effect of ball size on the energy efficiency of hybrid high-pressure roll mill/ball mill grinding, 199
Batch grinding
Wet grinding of gibbsite in a bead-mill, 396
Bead-mill
Wet grinding of gibbsite in a bead-mill, 396
Biological material
Use of compression behaviour of legume seeds in view of impact grinding prediction, 83
Blasting
Grindability enhancement by blast-induced microcracks, 52
Blé
Rheological properties of wheat endosperm with a view on grinding behaviour, 89
Boyle's law
An on-line pressure vessel rheometer for slurries, 418
Breakage
Effect of interface energy on the impact strength of agglomerates, 66
Breakage behavior
Breakage mechanisms and mill performance in ultrafine grinding, 135
Breakage distributions
Breakage mechanisms and mill performance in ultrafine grinding, 135
Breakage rates
Breakage mechanisms and mill performance in ultrafine grinding, 135
Bulk attrition
Breakage of macroporous alumina beads under compressive loading: simulation and experimental validation, 57

Calcium titanate
Mechanochemical synthesis of $CaTiO_3$ from a $CaO–TiO_2$ mixture and its HR-TEM observation, 162
Cell disintegration
Disintegration of microorganisms in a bead mill with a multi-disk impeller, 389
Centrifugal mill design and performance
Development of a centrifugal mill — a chain of simulation, equipment design and model validation, 342
Ceramic media
The modeling of dry grinding of quartz in tumbling media mills, 210
Charge motion
Charge motion model for vibration mills with high excitation, 311
Chemical additives
The selection of wet grinding chemical additives based on slurry rheology control, 430
Classification
The modeling of dry grinding of quartz in tumbling media mills, 210
Modeling classifier networks by Markov chains, 266
Intelligent Liberation and classification of electronic scrap, 295
Classifier network
Modeling classifier networks by Markov chains, 266
Clays
Two dimensions comminution of kaolinite clay particles, 125
Cleaning efficiency
Attrition as a process of comminution and separation, 205
Coal
Lab-scale roller table mill for investigating the grinding behaviour of coal, 30
Mechanical strength characterization of feed materials used in iron-making industry by Epstein theory, 95

Elsevier Science S.A.
PII: S0032-5910(99)00202-8

Coal blends
Effect of the grinding behaviour of coal blends on coal utilisation for combustion, 351
Coke
Mechanical strength characterization of feed materials used in iron-making industry by Epstein theory, 95
Combustion
Effect of the grinding behaviour of coal blends on coal utilisation for combustion, 351
Comminution
Wet comminution in stirred media mills — research and its practical application, 14
Grindability enhancement by blast-induced microcracks, 52
Evaluation of the transition matrix for comminuting pea seeds in an impact mill using a linear neural network, 119
Two dimensions comminution of kaolinite clay particles, 125
Breakage mechanisms and mill performance in ultrafine grinding, 135
Chemical surface modifications of sulphide minerals after comminution, 141
Numerical model of crushing of grains inside two-dimensional granular materials, 190
Particle motion and energy distribution in tumbling ball mills, 222
The discrete element method for fine grinding scale-up in Hicom mills, 250
Simulation of jet milling, 257
Comminution of metals in shredders with horizontally and vertically mounted rotors — microprocesses and parameters, 274
Effect of the grinding behaviour of coal blends on coal utilisation for combustion, 351
Investigations on ultra-fine grinding of titanium dioxide in a stirred media mill, 362
An on-line pressure vessel rheometer for slurries, 418
Comminution (Broyage)
Object components for comminution system softsensor design, 424
Comminution of ceramics
Comminution of ceramics in stirred media mills and wear of grinding beads, 374
Comportement en mouture
Rheological properties of wheat endosperm with a view on grinding behaviour, 89
Computer simulation
Effect of interface energy on the impact strength of agglomerates, 66
Computer simulations
Particle motion and energy distribution in tumbling ball mills, 222
Concentration measurement
Optical fiber sensor for measuring high particle concentrations, 413
Control (Control)
Object components for comminution system softsensor design, 424
Control strategy
Comparison of control strategies for a hematite processing plant, 443
Counter-flow
Process equation for centrifugal counter flow classification, 179
Critical size
Grinding and pozzolanic reactivity of quartz powders, 167
Crushing
Grindability enhancement by blast-induced microcracks, 52
Cryomilling
Cryomilling of Al/AlN powders, 328
Crystallite size
Cryomilling of Al/AlN powders, 328

DEA
Effect of interface energy on the impact strength of agglomerates, 66
Discrete Element Method
Particle motion and energy distribution in tumbling ball mills, 222
Discrete element method
The discrete element method for fine grinding scale-up in Hicom mills, 250
Development of a centrifugal mill — a chain of simulation, equipment design and model validation, 342
Dispersion
Investigations on ultra-fine grinding of titanium dioxide in a stirred media mill, 362
Distinct element analysis
Breakage of macroporous alumina beads under compressive loading: simulation and experimental validation, 57
Dry grinding
Mechanochemical synthesis of $CaTiO_3$ from a $CaO–TiO_2$ mixture and its HR-TEM observation, 162
Dureté
Rheological properties of wheat endosperm with a view on grinding behaviour, 89

Electronic scrap
Intelligent Liberation and classification of electronic scrap, 295
Elliptical vibrations
Eccentric vibratory mills — theory and practice, 302
Energy efficiency in comminution
The effect of ball size on the energy efficiency of hybrid high-pressure roll mill/ball mill grinding, 199
Epstein theory
Mechanical strength characterization of feed materials used in iron-making industry by Epstein theory, 95

Failure
Rheological properties of wheat endosperm with a view on grinding behaviour, 89
Fine grinding
The discrete element method for fine grinding scale-up in Hicom mills, 250
Operational conditions of a screw-feeder-equipped high-pressure roller mill, 282
Eccentric vibratory mills — theory and practice, 302
Fine particles
Industrial classification in a new impeller wheel classifier, 186
Fines generation
Fracture kinetics of particle bed comminution — ramifications for fines production and mill optimization, 113
Finest particles
Industrial classification in a new impeller wheel classifier, 186
Flotation
An approach of the whiteness quantification of crushed and floated talc concentrate, 106
Flow field visualization
Theoretical and experimental investigation on particle and fluid motion in stirred media mills, 406
Flow model
Prediction of the product size distribution in associations of stirred bead mills, 228
Fluidized bed jet grinding (broyage par jet en lit fluidise)
Experimental investigation on fluidized bed jet grinding, 337
Fluidized bed (lit fluidise)
Experimental investigation on fluidized bed jet grinding, 337
Fly ash
Pneumatic selection of fly ash: selection methods — influence of the operating parameters, 172
Fractal dimension
An approach of the whiteness quantification of crushed and floated talc concentrate, 106

Fracture
Numerical simulations of agglomerate impact breakage, 74
Breakage mechanisms and mill performance in ultrafine grinding, 135
Fracture physics
Numerical model of crushing of grains inside two-dimensional granular materials, 190
Fragmentation
A grindability test to study the influence of material processing on impact behaviour, 21
Investigations on ultra-fine grinding of titanium dioxide in a stirred media mill, 362
Friction
Simulation of jet milling, 257

Gibbsite
Wet grinding of gibbsite in a bead-mill, 396
Grade efficiency
Modeling classifier networks by Markov chains, 266
Grains and seeds
Evaluation of the transition matrix for comminuting pea seeds in an impact mill using a linear neural network, 119
Granular dynamics
Numerical simulations of agglomerate impact breakage, 74
Granular medium
Numerical model of crushing of grains inside two-dimensional granular materials, 190
Granulometric distribution
Grinding and pozzolanic reactivity of quartz powders, 167
Grindability test
A grindability test to study the influence of material processing on impact behaviour, 21
Grinding
From the product and process requirements to the milling facility, 2
Grindability enhancement by blast-induced microcracks, 52
Use of compression behaviour of legume seeds in view of impact grinding prediction, 83
An approach of the whiteness quantification of crushed and floated talc concentrate, 106
Prediction of the product size distribution in associations of stirred bead mills, 228
Fine grinding of polymers in a vibrated bead mill, 321
The influence of suspension properties on ultra-fine grinding in stirred ball mills, 357
Grinding bead motion
Theoretical and experimental investigation on particle and fluid motion in stirred media mills, 406
Grinding behaviour
Lab-scale roller table mill for investigating the grinding behaviour of coal, 30
Grinding experiments
Model-based evaluation of grinding experiments, 243
Grinding kinetics
Investigations on ultra-fine grinding of titanium dioxide in a stirred media mill, 362
Grinding mechanism
Determination of the most important grinding mechanism in stirred media mills by calculating stress intensity and stress number, 382

Hardgrove Index
Effect of the grinding behaviour of coal blends on coal utilisation for combustion, 351
Heavy metals
Attrition as a process of comminution and separation, 205
Hematite
Comparison of control strategies for a hematite processing plant, 443
High excitation
Charge motion model for vibration mills with high excitation, 311
High-pressure roller mill
Operational conditions of a screw-feeder-equipped high-pressure roller mill, 282
High-pressure roll mills
The effect of ball size on the energy efficiency of hybrid high-pressure roll mill/ball mill grinding, 199
Hybrid grinding systems
The effect of ball size on the energy efficiency of hybrid high-pressure roll mill/ball mill grinding, 199
Hydrocyclone
An on-line pressure vessel rheometer for slurries, 418

Image analysis
Steel scrap fragmentation by shredders, 288
Wet grinding of gibbsite in a bead-mill, 396
Impact
Effect of interface energy on the impact strength of agglomerates, 66
Numerical simulations of agglomerate impact breakage, 74
Impact crushing
Impact crushing of concrete for liberation and recycling, 39
Impeller wheel classifier
Industrial classification in a new impeller wheel classifier, 186
Iron ore sinter
Mechanical strength characterization of feed materials used in iron-making industry by Epstein theory, 95

Jet
Simulation of jet milling, 257
Jet grinding (broyage par jet)
Experimental investigation on fluidized bed jet grinding, 337

Kinetics
Modeling of the particle breakage kinetics in the wet mills for the paper industry, 237
Fine grinding of polymers in a vibrated bead mill, 321

Lattice parameter
Cryomilling of Al/AlN powders, 328
Liberation
Impact crushing of concrete for liberation and recycling, 39
Intelligent Liberation and classification of electronic scrap, 295
Limestone
The influence of suspension properties on ultra-fine grinding in stirred ball mills, 357

Macroporosity
Breakage of macroporous alumina beads under compressive loading: simulation and experimental validation, 57
Markov chain
Modeling classifier networks by Markov chains, 266
Markovian process
Evaluation of the transition matrix for comminuting pea seeds in an impact mill using a linear neural network, 119
Material processing
A grindability test to study the influence of material processing on impact behaviour, 21
Mechanical activation
Mechanical activation conditions of the Fe_2O_3 and V_2O_3 mixture powders in order to obtain a nanometric vanadium spinel ferrite, 155
Mechanical alloying
Synthesis of thermoelectric materials by mechanical alloying in planetary ball mills, 149
Cryomilling of Al/AlN powders, 328
Mechanical strength
Mechanical strength characterization of feed materials used in iron-making industry by Epstein theory, 95

Mechanochemical synthesis
Mechanochemical synthesis of $CaTiO_3$ from a $CaO–TiO_2$ mixture and its HR-TEM observation, 162
Mesures rhéologiques
Rheological properties of wheat endosperm with a view on grinding behaviour, 89
Metallography
Steel scrap fragmentation by shredders, 288
Metal recycling
Steel scrap fragmentation by shredders, 288
Metals
Comminution of metals in shredders with horizontally and vertically mounted rotors — microprocesses and parameters, 274
Micron range
Process equation for centrifugal counter flow classification, 179
Microprocesses
Comminution of metals in shredders with horizontally and vertically mounted rotors — microprocesses and parameters, 274
Microstructure
Mechanochemical synthesis of $CaTiO_3$ from a $CaO–TiO_2$ mixture and its HR-TEM observation, 162
Mill circuits
The modeling of dry grinding of quartz in tumbling media mills, 210
Milling
The modeling of dry grinding of quartz in tumbling media mills, 210
Milling behaviour
Rheological properties of wheat endosperm with a view on grinding behaviour, 89
Milling facility
From the product and process requirements to the milling facility, 2
Mill model validation
Development of a centrifugal mill — a chain of simulation, equipment design and model validation, 342
Mill optimization
Fracture kinetics of particle bed comminution — ramifications for fines production and mill optimization, 113
Mineral processing
Grindability enhancement by blast-induced microcracks, 52
Minerals
Change from pressure crushing in roller mills to impact crushing in production of mineral sand, 436
Mining
Grindability enhancement by blast-induced microcracks, 52
Model-based evaluation
Model-based evaluation of grinding experiments, 243
Modeling
Modeling of the particle breakage kinetics in the wet mills for the paper industry, 237
Modelling
Process equation for centrifugal counter flow classification, 179
Morphology
Wet grinding of gibbsite in a bead-mill, 396
Multimodal distribution function
Impact crushing of concrete for liberation and recycling, 39
Multi-phase flow
Theoretical and experimental investigation on particle and fluid motion in stirred media mills, 406

Nanometric size
Mechanical activation conditions of the Fe_2O_3 and V_2O_3 mixture powders in order to obtain a nanometric vanadium spinel ferrite, 155
Nepheline syenite
Change from pressure crushing in roller mills to impact crushing in production of mineral sand, 436
Neural network
Evaluation of the transition matrix for comminuting pea seeds in an impact mill using a linear neural network, 119
Non-Newtonian
An on-line pressure vessel rheometer for slurries, 418
Nozzle
Simulation of jet milling, 257
Nutating mill
The discrete element method for fine grinding scale-up in Hicom mills, 250

Object-oriented (Langage Orienté objet)
Object components for comminution system softsensor design, 424
Optical fiber sensor
Optical fiber sensor for measuring high particle concentrations, 413
Oxidized species
Chemical surface modifications of sulphide minerals after comminution, 141

Paper pulp
Modeling of the particle breakage kinetics in the wet mills for the paper industry, 237
Parameters
Comminution of metals in shredders with horizontally and vertically mounted rotors — microprocesses and parameters, 274
Particle
Optical fiber sensor for measuring high particle concentrations, 413
Particle-bed comminution
Fracture kinetics of particle bed comminution — ramifications for fines production and mill optimization, 113
Particle breakage
Numerical model of crushing of grains inside two-dimensional granular materials, 190
Modeling of the particle breakage kinetics in the wet mills for the paper industry, 237
Particle compound material recycling
Impact crushing of concrete for liberation and recycling, 39
Particle damage in comminution
The effect of ball size on the energy efficiency of hybrid high-pressure roll mill/ball mill grinding, 199
Particle motions
Particle motion and energy distribution in tumbling ball mills, 222
Particle shape
An approach of the whiteness quantification of crushed and floated talc concentrate, 106
Particle size distribution
Pneumatic selection of fly ash: selection methods — influence of the operating parameters, 172
Prediction of the product size distribution in associations of stirred bead mills, 228
Model-based evaluation of grinding experiments, 243
Particle strength
Breakage of macroporous alumina beads under compressive loading: simulation and experimental validation, 57
Pea
Evaluation of the transition matrix for comminuting pea seeds in an impact mill using a linear neural network, 119
Physical properties
Use of compression behaviour of legume seeds in view of impact grinding prediction, 83
Pneumatic classifier
Pneumatic selection of fly ash: selection methods — influence of the operating parameters, 172
Polyethylene
Fine grinding of polymers in a vibrated bead mill, 321
Polystyrene
Fine grinding of polymers in a vibrated bead mill, 321

Poly(vinyl acetate)
Fine grinding of polymers in a vibrated bead mill, 321
Powder
A grindability test to study the influence of material processing on impact behaviour, 21
Power consumption
Eccentric vibratory mills — theory and practice, 302
Pozzolanic reactivity
Grinding and pozzolanic reactivity of quartz powders, 167
Pressure vessel rheometer
An on-line pressure vessel rheometer for slurries, 418
Probe
Optical fiber sensor for measuring high particle concentrations, 413
Process equation
Process equation for centrifugal counter flow classification, 179
Process kinetics
Disintegration of microorganisms in a bead mill with a multi-disk impeller, 389
Process model (Modèle De Procédé)
Object components for comminution system softsensor design, 424
Product properties
From the product and process requirements to the milling facility, 2

Quasi-static
Breakage of macroporous alumina beads under compressive loading: simulation and experimental validation, 57

Reactivity
Chemical surface modifications of sulphide minerals after comminution, 141
Recycling
Intelligent Liberation and classification of electronic scrap, 295
Refining
Modeling of the particle breakage kinetics in the wet mills for the paper industry, 237
Rheological measurement
Rheological properties of wheat endosperm with a view on grinding behaviour, 89
Rheology
Two dimensions comminution of kaolinite clay particles, 125
An on-line pressure vessel rheometer for slurries, 418
Roller crushers
Change from pressure crushing in roller mills to impact crushing in production of mineral sand, 436
Roller table mill
Lab-scale roller table mill for investigating the grinding behaviour of coal, 30
Rupture
Rheological properties of wheat endosperm with a view on grinding behaviour, 89
Rutile
Mechanochemical synthesis of $CaTiO_3$ from a $CaO–TiO_2$ mixture and its HR-TEM observation, 162

Scale-up
From the product and process requirements to the milling facility, 2
The discrete element method for fine grinding scale-up in Hicom mills, 250
Scrap
Comminution of metals in shredders with horizontally and vertically mounted rotors — microprocesses and parameters, 274
Steel scrap fragmentation by shredders, 288
Screw feeder
Operational conditions of a screw-feeder-equipped high-pressure roller mill, 282
Semiconductors
Synthesis of thermoelectric materials by mechanical alloying in planetary ball mills, 149
Separation
Industrial classification in a new impeller wheel classifier, 186
Attrition as a process of comminution and separation, 205
Shape factor
Two dimensions comminution of kaolinite clay particles, 125
Shredder
Comminution of metals in shredders with horizontally and vertically mounted rotors — microprocesses and parameters, 274
Steel scrap fragmentation by shredders, 288
Sieving
Steel scrap fragmentation by shredders, 288
Silica flour
The modeling of dry grinding of quartz in tumbling media mills, 210
Simulation
Wet comminution in stirred media mills — research and its practical application, 14
Single-pipe vibratory mill
Eccentric vibratory mills — theory and practice, 302
Size distribution
Investigations on ultra-fine grinding of titanium dioxide in a stirred media mill, 362
Size distributions
Two dimensions comminution of kaolinite clay particles, 125
Size reduction
Breakage mechanisms and mill performance in ultrafine grinding, 135
Fine grinding of polymers in a vibrated bead mill, 321
Slurry rheology control
The selection of wet grinding chemical additives based on slurry rheology control, 430
Soft chemistry
Mechanical activation conditions of the Fe_2O_3 and V_2O_3 mixture powders in order to obtain a nanometric vanadium spinel ferrite, 155
Softsensor (Softsensor)
Object components for comminution system softsensor design, 424
Soil remediation
Attrition as a process of comminution and separation, 205
Steady-state
Comparison of control strategies for a hematite processing plant, 443
Stirred ball mills
The influence of suspension properties on ultra-fine grinding in stirred ball mills, 357
Stirred beads mill
Prediction of the product size distribution in associations of stirred bead mills, 228
Stirred media mill
Wet comminution in stirred media mills — research and its practical application, 14
Investigations on ultra-fine grinding of titanium dioxide in a stirred media mill, 362
Comminution of ceramics in stirred media mills and wear of grinding beads, 374
Determination of the most important grinding mechanism in stirred media mills by calculating stress intensity and stress number, 382
Stochastic
Modeling classifier networks by Markov chains, 266
Stress intensity
Wet comminution in stirred media mills — research and its practical application, 14
Determination of the most important grinding mechanism in stirred media mills by calculating stress intensity and stress number, 382
Stress number
Wet comminution in stirred media mills — research and its practical application, 14

Determination of the most important grinding mechanism in stirred media mills by calculating stress intensity and stress number, 382
Sulphide minerals
Chemical surface modifications of sulphide minerals after comminution, 141
Surface
Chemical surface modifications of sulphide minerals after comminution, 141
Suspension
Optical fiber sensor for measuring high particle concentrations, 413

Talc
An approach of the whiteness quantification of crushed and floated talc concentrate, 106
Target jet grinding (broyage par jet cible)
Experimental investigation on fluidized bed jet grinding, 337
Thermoelectrics
Synthesis of thermoelectric materials by mechanical alloying in planetary ball mills, 149
Turbulence
Theoretical and experimental investigation on particle and fluid motion in stirred media mills, 406
Two opposing nozzles jet grinding (broyage par jets opposes)
Experimental investigation on fluidized bed jet grinding, 337

Unmeasured variables (Variables non mesurées)
Object components for comminution system softsensor design, 424

Vanadium ferrite
Mechanical activation conditions of the Fe_2O_3 and V_2O_3 mixture powders in order to obtain a nanometric vanadium spinel ferrite, 155
Velocity
Simulation of jet milling, 257
Vibrating milling
Eccentric vibratory mills — theory and practice, 302
Vibration mill
Charge motion model for vibration mills with high excitation, 311
Viscosity
The influence of suspension properties on ultra-fine grinding in stirred ball mills, 357
Vitreousness
Rheological properties of wheat endosperm with a view on grinding behaviour, 89
Vitrosité
Rheological properties of wheat endosperm with a view on grinding behaviour, 89
Vortex
Simulation of jet milling, 257

Waste treatment
Pneumatic selection of fly ash: selection methods — influence of the operating parameters, 172
Wear
The modeling of dry grinding of quartz in tumbling media mills, 210
Eccentric vibratory mills — theory and practice, 302
Wear of grinding beads
Comminution of ceramics in stirred media mills and wear of grinding beads, 374
Wet classification
Process equation for centrifugal counter flow classification, 179
Wet grinding
The selection of wet grinding chemical additives based on slurry rheology control, 430
Wheat hardness
Rheological properties of wheat endosperm with a view on grinding behaviour, 89
Whiteness
An approach of the whiteness quantification of crushed and floated talc concentrate, 106

XRD line profile
Mechanical activation conditions of the Fe_2O_3 and V_2O_3 mixture powders in order to obtain a nanometric vanadium spinel ferrite, 155
